-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

1. Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, line 6 replace "upper button" with --upper and--.

In claim 1, lines 10-11 "the compression section" has no antecedent basis.

In claim 6, line 2 "the underside" has no antecedent basis.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-6 are rejected under 35 U.S.C. 102(e) as being anticipated by Wang.

Wang discloses in figures 1-4b a thin switch comprising a seat 1 having a housing compartment 11 which has an opening on an upper side and an electrode section; an elastic element 2 located above the electrode section; a trigger assembly located above the elastic element and including an upper button 31 and a lower button 32; and a cap 4 covering the seat having an opening to

Art Unit: 2832

allow the upper button to extend outwards. The upper button has a bracing section 314 and a coupling trough 311 for holding the compression section 321 of the lower button. The lower button includes a ram section 323 located between the compression section and the elastic element. The trigger assembly has a compression displacement which is determined by deformation of the compression section and the ram section when subjected to a force. The compression section is tightly coupled in the coupling trough. The ram section is located in the center of the compression section and is located on the underside of the compression section. Due to the tapered section 324 of the compression section, there is a gap formed between the coupling trough and the compression section.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Watanabe et al, Tsay, Bedoya et al, Brandt et al, Domzalski et al, and Yanai et al teach trigger assemblies having upper and lower buttons in which the lower button includes a compression section and a ram section.
